Infection Prevention Module

COVID-19 Security Solutions Available Now!

ZN-T5/W | Thermal Security Network Camera:

Combining thermal and visible light imaging, this camera uses a temperature-detection algorithm to ensure **only fever-free individuals enter a building**. This easy and cost-effective solution not only provides security against COVID, but also protects against unwanted visitors.

ZK-D3180S | Metal Detector with Body Temperature Detection

With 18 different detection zones, this infrared body temperature detector **sounds an alarm when the user's body temperature is above average**. It also detects a wide range of metallic items and works effectively in high-traffic areas.
