# About DoxyKlor

---

Created using a process that reliably captures and holds active chlorine dioxide in a stable, non-reactive, non-flammable colloidal suspension, DoxyKlor works as an antimicrobial sanitizer/disinfectant that destroys proteins in viruses, gram-positive & gram-negative bacteria, fungi, spores & more.

**DISTINCTLY  
DIFFERENT**

## HOW IT WORKS

---

DoxyKlor delivers chlorine dioxide gas onto target surfaces where the product unleashes the active chlorine dioxide powerhouse to *quickly & effectively* destroy pathogens.

Mixed with an aqueous solution, the gas evaporates safely after a few minutes, leaving no residue.

### EASY

Ready to use; no rinse, mix, or hassle

### SAFE

Environmentally friendly, no toxic by-products, and safe for food prep areas

### EFFECTIVE

Works over a wide pH range, 8x more powerful than bleach, and does not allow pathogenic mutation
